E-Learning

Introduction:

In this project I am developed a simple and responsive website using HTML, CSS, Bootstrap and JavaScript. Basically this website offer some services like training courses in top most trending courses. Here two types of courses we are provide first is free and second one is paid. Free courses can be access any of users but paid courses access only for those are buy the particular courses. Here we are also provide placement consultancy and software development facility.

Websites Modules

- Home Page
- Signup and Signin
- About us
- Contact us
- Services
- courses

Home Page

- Home page is main UI of this website and each module we can access with home page.

- Home Page contains Navbar, courses, services and about popular teachers and website footer.

- At home page two types of courses we are offered like free courses and paid courses. Free courses any user can be access without registration but paid users need to create an account and pay the fee of the particular fees then he can be access this particular courses for the particular time.

- For online payment here only card facility we are provided.

Signup and Signin

- When new user visit this website for the learning any courses then only some courses he can be access without signup and after signup he can access more free courses but for paid courses signup is compulsory and after payment of the particular when done then only they can access that particular courses.

- When one time user/student are singup done then he can access the courses directly after signin.

About Us

- In this module we are explain what exactly the purpose of the this website and what is the goal.

- So main goal of this website is that we can provide top most trending courses with top most industrial experienced teachers and mentor.

- And along with the course we are provide the placement support and certificate and letter of recommendation.

- Second objective is that we are provide the highly scalabe software development with cloud Iaas based application with high security.

Contact us

- It is simple page where the organization contact details are available and any one can be contact for any query or others things.

Offered Courses

- Website offered two types of courses first is free second is paid.
- Many new technology like blockchain, machine learning and cloud computing are paid courses which are teach by the India's top most teachers of this field so that users/student can get each and every thing related to this technology.

Services

- This website offered three type of service first is training for the specific technology, second is software development and third is cloud based infrastructure.

- These three services are very secure and reliable and trustable so that many companies prepared these services and so that this company is leading in this field.

- In future we can provide many more services like crypto-currency and making the blockchain based network .

Conclusion

The main objective is behind the creating this E-learning project is that top most trending technology like blockchain, machine learning, big data and cloud computing normal user/student can get the quality of material with great guidance so that they can enhance your skill set and boost their tech career's.
